

Hey! My name is Natalia Pugach. I'm 34 years old. I am from Minsk. I came to RS School to become a front-end developer.

In 2010, I graduated from the Belarusian State Medical University, Faculty of General Medicine, and until 2020 worked as an obstetrician-gynecologist. I became interested in programming about 2 years ago.

Working in medicine, I often wondered how to automate some of the routine actions of medical workers in the preparation of numerous medical documents, how to improve the quality of the doctor's work, how to spend more time communicating with the patient and minimize the filling out of 1000 documents. One of my ideas even managed to be implemented and applied in practice - it was an application for calculating the date of labor based on ultrasound data and other parameters.

But Until 2020, I discarded all thoughts about programming, because I did not believe in myself and considered that I could not learn anything. And when my interest in programming outweighed my belief in medicine, I signed up for a JS course from RS School. Honestly, it was very difficult to decide on such extreme changes in life, but my fundamental is better to do and regret than not to do and also regret. I appreciate RS School for the organization of this course.

I like layout very much, JS is harder. The most difficult thing for me was first of all to change my way of thinking and start thinking like a programmer, because before that I thought like a doctor for 10 years. But I'm not giving up. Perhaps in very tiny steps, but I'm going forward. And now, even in my night dreams, I write code.

I don't have big projects yet, I don't know frameworks, but there are several ideas that I can implement if I continue my studies in RS School. In the future, I would like to become a software developer for the medical or educational sphere. Thank you for watching this video! Bye!
